

SUNCHARGER

The green Energy Solution
for all mobile devices.

www.suncharger.de

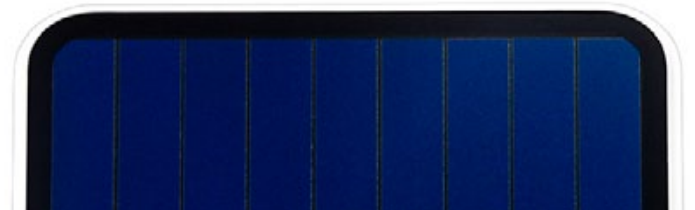

3 in 1

The SolarWorld SunCharger is 3 devices in one. It is a power supply, replacement battery and solar charger in one. No matter where or when, with the SunCharger you can charge your cell phone, smartphone or your digital camera anytime. Save yourself the trouble of carrying many different power supplies and increase the runtime of your smartphone battery. Use the integrated solar cell and generate climate-friendly electricity yourself.

The Power is with you

Whether business trip or active holiday – cell phone, camera, GPS and mp3 player are with you and naturally need electricity. The SolarWorld SunCharger provides energy at any time for all devices according to the new EU standard, independent of electrical outlets and power supply. The SunCharger is the solar power station for your mobile. High-efficiency silicon cells on the top constantly charge the integrated battery. This energy can be transferred via USB cable to all devices. By opening the slider, the area of the solar cell is almost doubled. The modern design and high quality make the SunCharger to the ideal companion for a green lifestyle. Generating climate-friendly solar power yourself and never having to do without electricity – that is the SolarWorld SunCharger.

Outlet Power

Plug the SunCharger into an electrical outlet and connect your cell phone to the integrated USB port. In this way you can use the SunCharger as a conventional power supply. This also charges the integrated battery.

Battery Power +

Charge your cell phone directly anytime off-grid with the integrated battery. One press of the button and the LED gives you information about the current charge state of the integrated battery.

Sun Power + +

Open the slider and position the SunCharger in the direction of the sun. The internal battery will now be charged with solar electricity from the two solar panels. The highly effective silicon cells achieve an efficiency of 17% and can charge a cell phone in approx. 4 hours in direct sunlight.
